About

I'm a platform engineer with a background in site reliability, security, and infrastructure operations. I build Kubernetes platforms, delivery pipelines, and automation that improve reliability and make developers' day-to-day work easier.

My experience spans Python, Go, Linux, Kubernetes, Terraform, Helm, AWS, and GCP. Earlier roles in SRE, security, and technical support shaped how I approach engineering: plan ahead, make systems easier to troubleshoot, and turn recurring operational headaches into maintainable, automation-focused tooling. I also build open-source projects focused on Kubernetes automation, Helm testing, and developer workflows.

I'm looking to stay hands-on, guide technical direction, and help teams build infrastructure they can confidently operate and evolve.

Experience

Lead Platform Engineer

SBE Vision, Inc. • Full-time

Sep 2024 - Sep 2026 · 2 yrs 1 mo

Wakefield, Massachusetts, United States · Remote

- Led platform engineering initiatives in support of SBE Vision's infrastructure across cloud and on-premise environments (prior to- and post-cloud migration).
- Migrated company to cloud infrastructure in GCP / GKE.
- Built and supported ephemeral developer environments to curtail cloud cost.
- Introduced a CI job that traversed deeply-nested Helm dependency trees in a monorepo for MR-based builds based on code change.
- Delivered a fault-tolerant and load tested CI cluster upgrade to improve reliability, scalability, and developer productivity.
- Transitioned secrets management to ESO.
- Delivered a Helm chart / rendered Kubernetes manifest -> Docker compose compiler to reduce time-to-delivery on PoC environments at customer sites, ensuring artifact support / generation and time cost / burden on the team stayed to a minimum.
- Led and mentored engineers by overseeing project execution, providing technical reviews, coordinating platform work, guiding implementation decisions, and supporting team skill set growth.
- Strengthened platform reliability / QoS, automation, and DevOps practices across infrastructure, CI/CD, and developer experience.

Site Reliability Engineer (Security)

Klaviyo • Full-time

Feb 2024 - Sep 2024 · 8 mos

Boston, Massachusetts, United States · Hybrid

Technologies:

- Python, Go
- Puppet
- Hashicorp products, such as Terraform, Vault
- AWS (IAM, EC2)

DevOps Engineer

SBE Vision, Inc. • Full-time

Aug 2022 - Feb 2024 · 1 yr 7 mos

Wakefield, Massachusetts, United States · Hybrid

SBE Vision develops an ontology based hub-and-spoke integration platform for interoperability between digital engineering tools.

Responsibilities

- Assisting customers and troubleshooting while deploying SBE Vision's microservice architecture solution to on-premise or cloud environments
- Writing internal technical documentation outlining processes, procedures and standards
- Assisted with disaster recovery in the event of on-premise power outages and hardware or software faults
- Deployed and maintained operations services
- Introduce new security, solutions and customs while practicing DevOps

Projects

- Introduced, maintained and automated an on-premise datacenter based on Rancher / RKE1 to reduce cloud costs and unify cluster access
- Introduced a scalable Kubernetes-based GitLab runners solution
- Centralized and templatized Helm charts in a monorepo with supporting GitLab CI trigger framework
- Introduced an IaC solution in Terraform and GitLab CI for managing infrastructure in all public clouds

Technologies

- Helm chart authoring
- Kubernetes (on-premise Rancher RKE1, GKE / EKS / {E,G,A}CR)
- GitLab CI / static runner / kubernetes runner deployment and administration
- Ansible
- Linux KVM virtualization / automation
- Terraform
- Sonatype Nexus
- Git hook authoring
- Rancher deployment and administration
- ZFS
- TLS certificates

DevOps Engineer

HqO • Full-time

Aug 2021 - Jul 2022 · 1 yr

Boston, Massachusetts, United States · Hybrid

HqO creates workplace experience technology that transforms how people connect with each other and the places they work.

Responsibilities

- Writing technical documentation for engineers outlining procedures, solutions to problems, and onboarding.

Technologies

- CircleCI / Orb authoring
- GitHub Actions
- Argo CD
- Kubernetes / EKS
- Helm chart authoring / Helm chart-testing (ct)
- Spot.io
- Infracost
- Loft.sh / DevSpace
- Terraform / Vault / Hashicorp Cloud
- Artifactory
- Git pre-commit hooks authoring

Education

Monroe Community College

Associate's Degree, Mathematics

2015 - 2016

Projects

Skills

Appendix

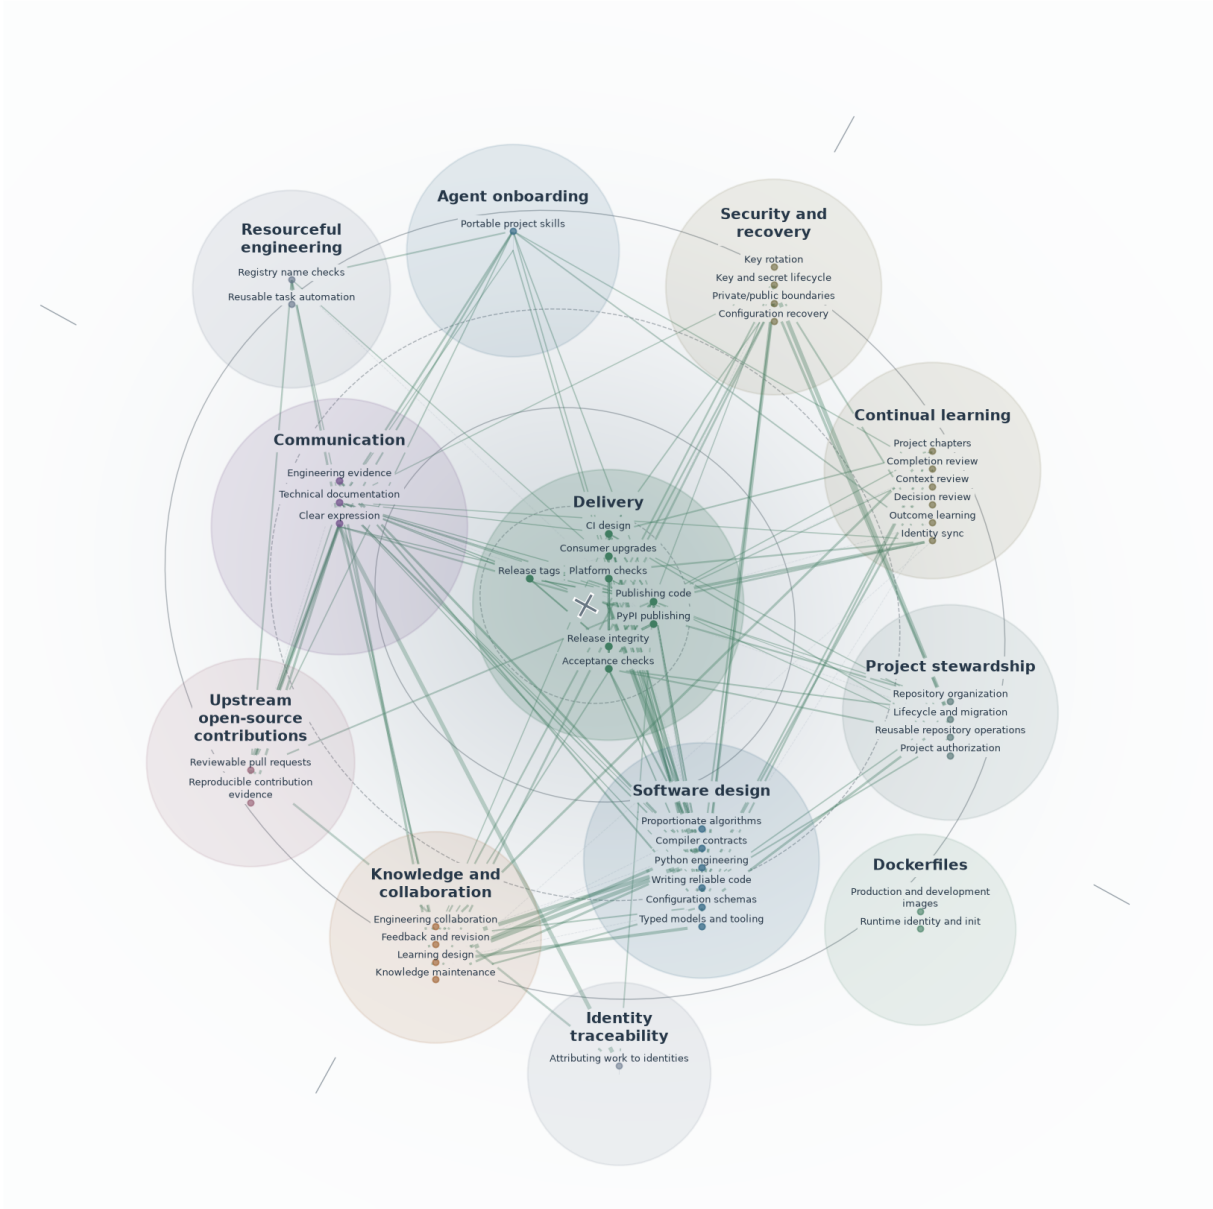

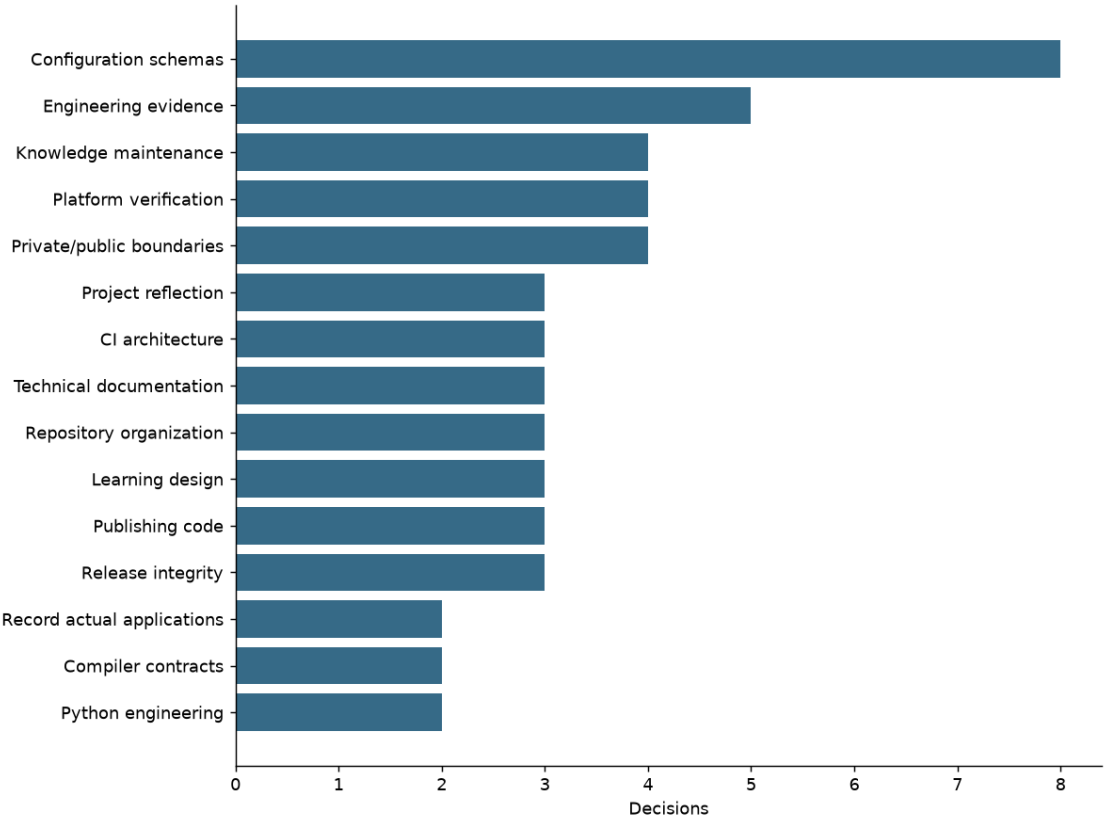

Figure 1 How my skills connect

Each bubble groups an engineering discipline and its skills; the connections show how ideas are organized and reused across areas of work. Larger, more central bubbles reflect greater recent recorded use. The shaded distribution, ellipses, and center mark summarize that working emphasis; fading indicates peripheral focus, not forgotten skills. Together, they show how different parts of my engineering practice support one another.

These plots are updated automatically from my recorded day-to-day work, providing an evolving view of my practices and identity as a software engineer. Each PDF captures the evidence available at its build.

Generated with Witful · How updates reach this resume

Recorded decisions, not a measure of proficiency.

Figure 2 What informs my decisions

The bars show which skills and lessons inform my current accepted engineering decisions. Each count represents a decision that explicitly references that concept; revised decisions replace earlier versions, and retired decisions are excluded. This makes recurring influences on my judgment visible, grounded in recorded choices rather than a self-assessed skill rating.

These plots are updated automatically from my recorded day-to-day work, providing an evolving view of my practices and identity as a software engineer. Each PDF captures the evidence available at its build.
